

Tauqeer Ahmed

LEAD SOFTWARE ENGINEER | Microservices | Distributed Systems | Platform Engineering
Bengaluru, India | +91 93805 21623 | ahmedtaukhir@gmail.com | LinkedIn | Portfolio | GitHub

PROFESSIONAL SUMMARY

Lead Software Engineer with 7+ years of experience designing and modernizing microservices, distributed systems, and cloud-native platforms across banking, healthcare, telecom, and enterprise infrastructure domains. Hands-on expertise in Java, Spring Boot, Spring Cloud, Apache Kafka, Kubernetes, Cassandra, DB2, and MySQL, with strong experience in system design, HLD/LLD, event-driven architecture, platform engineering, reliability, technical leadership, and end-to-end solution delivery.

CORE ENGINEERING EXPERTISE

- Architecture & System Design:** Microservices, service decomposition, API design, HLD/LLD, and scalable distributed-system design.
- Distributed & Event-Driven Systems:** Kafka-based processing, asynchronous workflows, retry and recovery, ETL pipelines, and distributed data solutions.
- Platform Engineering & Reliability:** Kubernetes-based platforms, CI/CD, observability, security remediation, automation, performance, and high availability.

TECHNICAL SKILLS

Programming	Java 8/11/17, JavaScript
Application Engineering	Spring Framework, Spring Boot, Spring Cloud, Hibernate, JPA, REST APIs, Microservices, Liquibase, Apache Kafka
Architecture & System Design	Distributed Systems, System Design, HLD, LLD, API Design, Event-Driven Architecture, Multithreading
Databases	Cassandra, DB2, MySQL, PostgreSQL
Observability	Grafana, Prometheus, Zipkin, Promtail
Workflow & Orchestration	Camunda, BPMN
Platform & DevOps	Docker, Kubernetes, Jenkins, CI/CD, Git, GitHub, Bitbucket, GitLab
Testing & Quality	JUnit, Mockito, Postman, SonarQube

PROFESSIONAL EXPERIENCE

Staff Engineer Nagarro	Dec 2025 - Present
Client: Amway Next Gen Bengaluru, India	
Technology: Java 17, Spring Boot, REST APIs, dashboard-driven solutions	
- Contributed to the Amway Next Gen enterprise proof-of-concept initiative, focusing on backend API development and dashboard-driven solutions. - Designed and developed scalable RESTful APIs using Java and Spring Boot to support analytics dashboards, data aggregation, and business workflows. - Collaborated with frontend teams, architects, and business stakeholders to rapidly prototype and deliver client-centric solutions. - Participated in architecture discussions, requirement analysis, and technical feasibility evaluations for enterprise engagements. - Conducted peer code reviews and contributed to engineering best practices to ensure maintainable, scalable, and production-ready solutions.	

Lead Engineer | HCLTech

Apr 2025 - Dec 2025

Client: Broadcom | Tanzu Kubernetes Grid Integrated Edition (TKGI) | Platform Engineering | Bengaluru, India

Technology: Java 17, Spring Boot, Docker, Kubernetes, BOSH, Concourse, Angular

Enterprise Kubernetes platform used to deploy, manage, and secure production Kubernetes clusters, providing lifecycle management, infrastructure automation, and platform reliability for containerized applications.

- Removed tightly coupled legacy observability components by refactoring integrations across **6+ platform services**, deployment pipelines, and build workflows, reducing technical debt and improving long-term maintainability.
- Resolved **50+ critical/high-severity CVEs** across **8+ platform components** and multiple supported releases, achieving 100% compliance and zero production security incidents.
- Managed production Kubernetes clusters, Pods, and BOSH-managed virtual machines supporting four concurrent product release streams across monthly major, minor, and patch releases.
- Led end-to-end delivery of platform features from technical design through implementation, testing, and production deployment across multiple product releases.
- Conducted code reviews, mentored junior engineers, led sprint estimations, and collaborated with architects on platform design and modernization initiatives.

Senior Software Engineer | Wissen Technology

Dec 2022 - Apr 2025

Client: Morgan Stanley | Strategic Reporting Architecture | Banking and Investment Management | Bengaluru, India

Technology: Java 17, Spring Boot, Spring Cloud, Microservices, Angular, DB2, Liquibase, JUnit, Mockito, Jenkins, CI/CD

Modernized an enterprise banking reporting platform by transforming a legacy monolith into scalable microservices, automating reporting workflows, and improving deployment reliability through database versioning and platform standardization.

- Decomposed a legacy monolithic reporting platform into **8+ Spring Boot microservices**, improving deployment flexibility and reducing release dependencies.
- Upgraded three enterprise Angular applications from Angular 7 to Angular 17, reducing technical debt and improving application performance.
- Developed **10+ reporting automation features**, including report cloning, bulk operations, scheduled jobs, and input processing, reducing manual effort by **over 40%** and accelerating business reporting workflows.
- Implemented Liquibase-based schema versioning across Dev, QA, UAT, and Production, enabling consistent deployments and eliminating schema drift.
- Conducted code reviews for **20+ feature deliveries**, mentored engineers, and established engineering best practices to improve code quality and delivery consistency.
- Owned delivery of **20+ features** from requirement analysis and technical design to implementation, testing, deployment, and production support.
- Participated in architecture discussions, API design, and solution planning to deliver scalable enterprise reporting services.

Software Engineer | Optum Global Solutions

Nov 2021 - Dec 2022

Project: IRIS | Healthcare Interoperability | Bengaluru, India

Technology: Java 11, Spring Boot, Microservices, Apache Kafka, MySQL, SFTP, Grafana, Prometheus, JUnit, Mockito

Built a healthcare interoperability platform that transformed HL7 messages into FHIR resources, processed real-time clinical events, and enabled secure healthcare data exchange through scalable microservices, automation, and observability.

- Designed and implemented an HL7-to-FHIR transformation pipeline supporting multiple clinical integrations, enabling standardized healthcare data exchange.
- Designed and implemented **10+ REST APIs** and developed Spring Boot microservices to process real-time clinical events through Apache Kafka while enabling secure healthcare data exchange via SFTP.
- Implemented resilient retry and recovery workflows while optimizing healthcare data processing for improved throughput and reliable enterprise integrations.

- Automated FHIR validation and testing workflows, reducing manual QA effort by **30%** while improving data quality and compliance.
- Implemented end-to-end monitoring and alerting using Grafana and Prometheus, reducing issue detection time by **40%** and improving operational visibility across services.
- Collaborated with cross-functional teams to define integration strategies, review technical designs, and deliver reliable healthcare solutions across multiple enterprise systems.

Software Engineer | Tecnotree Convergence Pvt Ltd

Aug 2019 - Oct 2021

Projects: DCBS / DLM | Telecom Billing & Workflow Automation | Bengaluru, India

Technology: Java 8/11, Spring Boot, Microservices, Apache Kafka, MySQL, Cassandra, Jenkins, Docker, Kubernetes, Camunda, BPMN

Built a telecom billing and workflow automation platform leveraging event-driven microservices, distributed processing, BPMN orchestration, and cloud-native deployment pipelines to automate billing operations and enterprise integrations.

- Designed and developed Spring Boot microservices to process **10M+ telecom billing transactions monthly** using Apache Kafka, Cassandra, and downstream URA integrations.
- Designed retry and recovery workflows that automatically reprocessed failed billing transactions, reducing manual intervention by **over 80%**.
- Designed distributed event-driven processing pipelines using Apache Kafka with parallel consumers and asynchronous processing services, improving scalability and throughput for high-volume billing workloads.
- Modernized static dashboards into **15+ real-time reports** for operational analytics, improving management visibility and reducing reliance on third-party reporting tools.
- Automated **25+ business workflows** using Camunda and BPMN, reducing manual processing effort by **60%**.
- Standardized configuration management across **10+ microservices** using Spring Cloud Config, Docker, Kubernetes, Rancher, and GitHub pipelines.

EDUCATION

Bachelor of Computer Science & Engineering | KNSIT, Karnataka, India

2015 - 2019

AWARDS

- **Q4 Result Driven Award - Tecnotree** - Recognized for engineering excellence, timely delivery, and scalable telecom billing solutions.
- **Value Award - Optum Global Solutions** - Recognized for delivering high-quality healthcare platform solutions and improving reliability through automation.
