PROFILE SUMMARY

- Nearly 7 years of experience as Lead Engineer / Senior Software Engineer, delivering scalable backend solutions across finance, healthcare, telecom, and enterprise domains.
- Strong expertise in designing enterprise-grade backend systems using microservices architecture, focusing on scalability, maintainability, and performance optimization.
- Hands-on experience in cloud-native development and containerized deployments, leveraging Kubernetes (TKGI), Docker, Jenkins, and CI/CD pipelines for production-grade releases.
- Proven ability to build event-driven and real-time data processing systems, enabling efficient, high-throughput & asynchronous system communication.
- Demonstrated success in modernizing legacy applications through monolith-to-microservices transformation, improving system agility and operational efficiency.
- Skilled in production reliability, Agile delivery, technical mentoring, and cross-functional collaboration, ensuring stable, high-quality enterprise software delivery.

WORK EXPERIENCE

Lead Engineer | [Nagarro](#)

Dec 2025 - Present Bangalore, India

- Engaging in enterprise POC development initiatives for clients such as AMWAY, delivering backend services & dashboard-oriented solution prototypes.
- Architecting and building scalable RESTful APIs using Java and Spring Boot, enabling analytics processing, data aggregation, and workflow automation.
- Partnering with frontend teams, solution architects, and business stakeholders to rapidly validate and refine client-focused product ideas.
- Driving architecture evaluation and technical feasibility studies, contributing to design decisions for enterprise-grade implementations.
- Reviewing code and guiding engineering standards and best practices, ensuring maintainability, scalability, and production readiness of solutions.
- Supporting full-cycle agile delivery activities, including requirement understanding, prototyping, and iterative solution development.

Lead Engineer | [HCLTech](#)

Apr 2025 – Dec 2025 Bangalore, India

- Worked on TKGI (Tanzu Kubernetes Grid Integrated Edition) platform, improving Kubernetes cluster stability, platform automation, and overall infrastructure reliability.
- Eliminated legacy Wavefront observability integrations, streamlining monitoring architecture and reducing long-term maintenance overhead.
- Resolved critical and high-severity security vulnerabilities (CVEs) across application stacks, achieving a secure, zero-critical-CVE production state.
- Strengthened engineering quality through code reviews, design validation, and enforcement of secure and maintainable development practices.
- Supported end-to-end platform delivery by collaborating with cross-functional teams on incident resolution, deployment optimization, sprint planning, and technical mentorship.

CORE COMPETENCIES

Technical Leadership Solution Architecture

Enterprise Application Delivery Agile Project Execution

Production Incident Management

Code Quality Governance

End-to-End Delivery Ownership

Enterprise Back-end System Design API Integration

Event-Driven Architecture Implementation

TECHNICAL SKILLS

Languages: Java, Java 17, JavaScript

Backend: Spring Boot, Spring Cloud, Hibernate, JPA, REST APIs, Microservices, Liquibase

Cloud & DevOps: Docker, Jenkins, Kubernetes, AWS

Databases: MySQL, Cassandra

Frontend: Angular, Angular 17, HTML5, CSS3

Monitoring: Grafana, Prometheus

Testing: JUnit, Mockito, Postman, SonarQube

Version Control: Git, GitHub, Bitbucket, GitLab

Modeling: Camunda, Zeebe

ACHIEVEMENTS

- Improved scalability by modernizing legacy systems to a microservices architecture, reducing deployment complexity.
- Enhanced system reliability using Grafana and Prometheus observability setup, improving incident detection and resolution time.
- Increased code quality by strengthening JUnit/Mockito automation, improving early defect detection before release.
- Optimized throughput using Kafka-based event-driven processing, improving overall system processing efficiency.

Senior Software Engineer | [Morgan Stanley](#)

 Dec 2022 - Apr 2025  Bangalore, India

Wissen Technology, Consultant at Morgan Stanley in Investment Management

- Led monolith-to-microservices transformation of the GRM platform using Java, Spring Boot & Spring Cloud, enhancing system scalability & deployment agility.
- Modernized frontend architecture by migrating 3 enterprise modules from Angular 7 to Angular 17, improving performance & reducing technical debt.
- Developed advanced reporting and automation features (clone, multi-remove, ad-hoc & input jobs), cutting manual operational effort by over 40%.
- Managed database lifecycle changes using Liquibase, ensuring consistent schema versioning and safe deployments across multiple environments.
- Contributed across the delivery lifecycle in an Agile setup by supporting CI/CD releases, cross-environment deployments, peer reviews, and mentoring, while also building a centralized documentation portal to improve onboarding and knowledge sharing.

Software Engineer | [Optum Global Solutions \(India\) Pvt. Ltd.](#)

 Nov 2021 - Dec 2022  Bangalore, India

Product-based Company | Healthcare Domain (UHG)

- Delivered an HL7 to FHIR data transformation pipeline, improving healthcare data interoperability across multiple critical business workflows.
- Automated FHIR validation and testing processes, reducing manual QA dependency by ~30% and strengthening data compliance accuracy.
- Built a Java-based Roster management API, fully replacing manual file handling with automated upload and processing workflows.
- Developed Kafka-based Spring Boot microservices for real-time clinical data processing, along with secure SFTP-based data exchange for downstream systems.
- Implemented observability and quality engineering practices using Grafana, Prometheus, JUnit, and Mockito, achieving high system visibility and 90%+ test coverage.

Software Engineer | [Tecnotree Convergence Pvt. Ltd.](#)

 Aug 2019 - Oct 2021  Bangalore, India

Product-based Company | Telecom Domain

- Developed Kafka-driven Spring Boot microservices for telecom billing workflows, enabling real-time invoice processing with Cassandra-backed data retrieval and REST API integrations.
- Engineered fault-tolerant processing logic using scheduled retries and multithreaded execution to ensure recovery of failed billing transactions without manual intervention.
- Architected an event-driven processing ecosystem, decoupling consumer and processing layers with Kafka and improving system throughput using asynchronous execution patterns.
- Transformed static operational dashboards into interactive real-time reporting systems, enhancing visibility into key business & utilization metrics.
- Implemented end-to-end workflow automation and deployment enablement using Camunda/Zeebe (BPMN), Spring Cloud Config, and containerized CI/CD pipelines on Docker, Kubernetes, and Rancher.

AWARDS

-  Value Award – Optum Global Solutions (2022)
-  Q4 Result Driven Award – Tecnotree
Convergence Pvt Ltd (2021)
-  Academic Topper – KNSIT (2019)

EDUCATION & TRAININGS

Data Structures, Java & Web Technologies | [jSpiders](#)

 2019

Bachelor of Computer Science & Engineering | [KNSIT, VTU](#)

 2019 | 7.5 CGPA

Higher Secondary Education | [MSPU](#)

 2015 | 77%

Secondary Education | [Sandeepani Public School](#)

 2013 | 86%

PERSONAL DETAILS

- **Work Authorization:** Authorized to work in Gulf countries
- **Relocation:** Open to relocation across GCC countries
- **Passport:** Valid Indian passport
